SUMMARY

Software Engineer with nearly 2 years of experience building and maintaining production Ruby on Rails applications. Architected modular monolith systems with Rails engines, implemented multi-tenant architecture with row-level isolation, and led multiple major Rails upgrades. Experienced in backend API design, modern frontend integration with Hotwire and React, containerized deployments with Docker and Kamal, and Nepal-specific domain engineering including Bikram Sambat fiscal year logic.

WORK EXPERIENCE

Danphe Software Labs

Associate Software Engineer

Kathmandu, Nepal

Apr 2024 – Jun 2026

- Architected a **modular monolith** ERP system using multiple Rails engines for clean domain separation across HR, finance, and project management modules.
- Implemented **multi-tenant architecture** with `acts_as_tenant`, enabling row-level data isolation across companies with shared authentication and cross-company partnership support.
- Built **JWT-based API authentication** with token refresh flow and **Pundit authorization policies** with role-based auth scopes for fine-grained access control.
- Led multiple **Rails upgrades** (6 → 7 → 7.1+) on a client-facing survey platform, handling dependency updates, configuration changes, and deprecation fixes.
- Modernized frontend architecture by migrating from jQuery and Rails UJS to **Hotwire** (Turbo Streams, Stimulus) and **React 18** with Zustand and TanStack Query.
- Migrated legacy asset pipelines from Webpacker and Sprockets to **ESBuild** and **Vite**, improving build performance and developer experience.
- Integrated **Nepali Bikram Sambat calendar** and fiscal year logic for Nepal-specific tax compliance (SSF, CIT, TDS) in the finance module.
- Built **PDF generation** services for invoices, payslips, and contracts using Prawn and Wicked PDF, and developed bulk CSV/XLSX import/export pipelines.
- Integrated **AWS Cognito SSO** for a client-facing survey platform and implemented Single Table Inheritance Patterns.
- Containerized applications using **Docker** and deployed to AWS EC2 via **Kamal**, with CI/CD pipelines on GitHub Actions running RSpec test suites and Brakeman security scans.

PROJECTS

SmartOffice ERP — Multi-tenant ERP for software consultancies

Ruby on Rails 8.0, PostgreSQL, Erb, React, Hotwire, Pundit, Devise + JWT, Docker, Kamal, Solid Queue

- Built a comprehensive ERP covering HR management, financial operations (invoicing, payroll, tax compliance), and project tracking with billable resource management.
- Designed Rails engines as a modular monolith with multi-tenant row-level isolation, and cross-company partnership features for outsourcing relationships.
- Implemented API layer with JWT authentication, Pundit policies, and versioned endpoints for invoices, payroll, clients, and purchase bills.

MindGym Diagnostics — Employee survey and engagement analytics platform

Ruby on Rails 7.0, PostgreSQL, Stimulus.js, Slim, Vite, AWS Cognito, Postmark, Twilio, Docker

- Contributed to a survey platform supporting one-time assessments, drip campaigns, and multi-language surveys at scale.
- Led Rails upgrade and frontend modernization (jQuery → Hotwire, Webpacker → Vite), stabilized RSpec test suites and CI pipeline with 39 test suites.
- Worked on event-based message scheduling system for automated email/SMS delivery via Postmark and Twilio.

Maithili News Classification — Academic

PyTorch, HuggingFace Transformers, React, Netlify

- Fine-tuned a custom MaiBERT model on a Maithili-language news dataset, outperforming pre-existing models on classification accuracy.
- Built and deployed a React frontend on Netlify to showcase real-time news classification results.

Agricultural Marketplace — Academic

React, Django, Django REST Framework, PostgreSQL

- Built a full-stack e-commerce platform with RESTful APIs for user, product, order, and authentication management.

TECHNICAL SKILLS

Languages: Ruby, JavaScript, SQL, Python

Frameworks: Ruby on Rails, React, Hotwire (Turbo Streams, Stimulus), Django

Backend: RESTful APIs, Devise, JWT, Pundit, RSpec, Solid Queue, Sidekiq

Databases: PostgreSQL, MySQL, Redis, SQLite

Frontend: Tailwind CSS, ESBuild, Vite, Zustand, TanStack Query

DevOps & Tools: Docker, Kamal, GitHub Actions, Git, Linux, AWS (EC2, S3, Cognito)

EDUCATION

IOE Pulchowk Campus

Bachelor in Computer Engineering

Lalitpur, Nepal

Nov 2019 – Apr 2024

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification — Coursera (DeepLearning.AI)

Advanced Learning Algorithms — Coursera (DeepLearning.AI)

Neural Networks and Deep Learning — Coursera (DeepLearning.AI)

Version Control — Coursera (Meta)

Programming in JavaScript — Coursera (Meta)

TRAININGS

Coding and Programming with Python — Samsung Innovation Campus

Applied Data Science — Samsung Innovation Campus

Security Operations Fundamentals — Logpoint
